Helly Hansen's Oxford Hooded Softshell Winter Jacket bridges the gap between rugged comfort and functionality.

BY BUILD CANADA MAGAZINE

For outdoor construction work, meeting a new client, or going on brisk morning dog walks in the winter months, the Oxford Hooded Softshell Winter Jacket by Helly Hansen is a welcome addition to your arsenal, delivering a great big dose of warmth whenever the cold starts to bite.

On brand for Helly Hansen's Workwear line, the style of the Oxford manages to bridge the gap between rugged comfort and functionality with a pile fleece lining,

a detachable, adjustable hood, and rib-knit bottom sleeve and hem. The functional Oxford style is both rugged and professional, making it suitable for construction sites while also serving as a polished jacket that tradespeople can wear when meeting new clients.

It's insulated with Pile fleece lining and makes the Oxford lightweight while effectively keeping your core warm.

PROFESSIONALS

The Oxford has no shoulder seams, and provides slightly less insulation on the arms, allowing for greater freedom of movement. I appreciate the spacious pockets, which seem even larger, along with the robust YKK zippers.

Additionally, it features a high-performance membrane that helps keep the rain at bay. While it may not be completely waterproof, it will protect you from a light shower. This jacket is perfect for individuals who prioritize versatility. It seamlessly transitions between various winter workwear and leisure activities with ease. It provides warmth even when temperatures plummet into the single digits here in Ontario, and you can enhance its effectiveness by layering with additional winter gear. With its high-quality construction, practical features, and understated style, this

jacket will quickly become a go-to piece in your wardrobe.

Bringing the comfort and weather resistance of a softshell into the Oxford family. Ripstop capped shoulders and removable hood provide even more durability and weather protection, while the full stretch softshell body balances breathability with soft brushed interior. Ultimate flexibility to use as a standalone on cold mornings at the job site with wind and weather resistance as well as a layering piece for added warmth.
